Whitecliffe

Bachelor of Applied Information Technology

Connections matter.

Connections *that* matter.

To people, to technology, to knowledge, to industry. To your future.

At Whitecliffe you connect to your chosen field - **Network Engineering & Security** or **Web & Software Development**, while still understanding the whole picture.

From year one your projects reinforce that specialisation: **building secure** networks or **coding full-stack applications** that solve real business challenges. Connecting **theory with practice**. Skills with application.

You learn under practising IT experts who know what employers demand and you tackle live briefs that put your specialisation front and centre.

Want to focus on cybersecurity? You'll **configure firewalls**, **manage encrypted data**, and **defend networks** under simulated attack. Passionate about web? You'll **architect scalable web services**, **develop progressive web apps**, and **secure user data** with modern frameworks. But this is just a taste of what you'll find here.

Beyond technical mastery, every assignment strengthens your **project management**, **teamwork**, **and strategic thinking**- so you graduate not just as a specialist, but as someone who can integrate their expertise into any IT solution.

Ready to connect to your future?

If you want any more information - please pick up a prospectus or you can book a tour or apply online.

If you have any questions- **give us a call**.

Applications are now open.

Whitecliffe's Bachelor of Applied Information Technology.
